Summary

UX/UI Design, technical support, and process automation professional with experience across national and international projects. Combines analytical thinking and design empathy with technical skills in Shopify, CRM, Figma, and AI-based automation (n8n).

Solid experience improving performance indicators, information architecture, usability, and user experience, along with e-commerce and AI chatbot projects.

Experience

Vivelon (Portugal)

UX/UI Designer Freelancer — August 2025 – Present

Led the complete UX/UI design of the brand's international e-commerce, including migration of prototypes from Figma to Shopify and integration of the visual and functional experience into the platform.

Conducted User Journey and Customer Journey mapping, as well as information architecture covering header, footer, and category structure.

Performed national and international benchmarking, defining usability standards and competitive differentiators for the European supplements market.

Developed onboarding, homepage, landing pages, blog, and Product Detail Page (PDP), focused on smooth navigation, accessibility, and conversion.

Executed UX Writing and adapted content for the Portuguese audience, ensuring clarity, consistency, and cultural fit of the communication.

Modeled the complete payment and checkout flow, optimizing the mobile-first experience and ensuring compliance with European Union regulations (GDPR/EFSA).

Created banners and visual campaigns for Instagram, Facebook, TikTok, and LinkedIn, keeping consistency with the brand's visual identity and tone of voice.

Structured automated email campaigns (“Happy Flow”) and AI chatbot journeys, including post-launch rebuild planning (MVP).

Took part in product meetings with international stakeholders, contributing to the prioritization of continuous improvements and deliverables aligned with usability and business goals.

Conducted user research and created personas from interviews and data, informing design decisions and feature prioritization.

Produced low- and high-fidelity wireframes and prototypes in Figma, validated through usability and concept testing before development.

Handoff to the development team — communicating prototypes, specifications, and interface behaviors — supported by a technical background in HTML, CSS, and JavaScript.

Moveedu Inovação e Educação LTDA

CRM Support Assistant – March 2025 – Present

Provided remote technical support to franchisees across Brazil, covering server configuration, record validation, host adjustments, and ticket resolution via CRM.

Acted as level 3 (N3) technical support, handling the most complex and critical tickets escalated from previous levels, with advanced diagnostics and resolution of incidents requiring specialized technical knowledge.

Developed and implemented the parent-child ticket structure in the CRM (Movidesk), enabling the grouping and linking of related tickets for centralized handling of recurring incidents and multi-unit demands, reducing rework and improving tracking and batch closure.

Contributed to Project Hermes — an intelligent triage agent for the CRM, structured in stages (service catalog validation, knowledge base update, and agent implementation in Movidesk); worked on the validation and structuring of the service catalog, the foundation that enables automated ticket triage.

Led follow-up meetings and validation of department indicators, focused on reducing overdue tickets and increasing the resolution rate within SLA.

Analyzed recurring patterns in reported issues, proposing automation and process-improvement solutions in collaboration with the development and finance teams, aiming to optimize response time and reduce manual effort.

Took part in developing an AI-integrated database (n8n) to automate ticket triage, contributing to greater agility and operational intelligence.

Supported Product Design and UX initiatives across the organization's internal systems, aiming to improve the experience for franchisees and the technical team.

AgroRô Fertilizantes e Implementos Agropecuários

Design/Administrative Intern – April – September 2024

Developed visual strategies for social media, including informational carousels and customer feedback videos, resulting in a 15% increase in engagement and greater online interaction.

Implemented improvements in order tracking and logistics quotes, reducing average customer response time by 20%.

Created dynamic spreadsheets for financial analysis and collections control, optimizing administrative organization and reducing operational errors by 10%.

Provided customer support in payment and tracking processes, reaching a 90% satisfaction rate in reported interactions.

Tech Trust Soluções em TI e Processos

Commercial Department Intern – October 2023 – April 2024

Prospected new strategic leads, expanding the client base by 25% through targeted research and qualified acquisition strategies.

Managed and continuously maintained the CRM, ensuring data accuracy above 95% and better tracking of the client funnel.

Developed customized presentations and training, resulting in a 20% increase in platform adoption and greater end-client satisfaction.

Supported new users during onboarding, ensuring that 90% of collected feedback was incorporated into continuous improvements to system interface and navigability.

Mudando Jeitos e Confecções LTDA

Customer Service & Sales – October 2021 – June 2023

Carried out in-person and online sales, achieving a 15% increase in monthly targets, focused on personalized service and customer loyalty.

Managed product registration and invoice issuance, reducing operational errors by 10% and speeding up the registration process by 20%.

Planned and executed digital advertising campaigns, expanding online reach by 25% and contributing to the brand's growth on digital platforms.

UX Projects

Pitanga — Banking app for wearables

Financial product concept for wearable devices: QR code payment on smartwatch, spending dashboard, card management, and consumption analysis. Research, information architecture, wireframes, and high-fidelity prototype in Figma.

Rota Financeira — Expense management for rideshare drivers

Volunteer UX role designing a financial management app for drivers: income and expense dashboards, vehicle maintenance tracking, and financial-flow modeling, focused on data clarity and decision-making.

Full case studies available in the portfolio.

Education

UX/UI Design

Design Circuit – 2024–2026

Specialized course in UX/UI Design, focused on developing practical skills in research processes, user journey mapping, interface creation, wireframes, UI prototyping, and usability testing

The course also covers advanced concepts of usability, accessibility, and user-centered design, using tools such as Figma and Notion to create innovative digital experiences aligned with user needs.

Systems Analysis and Development

Fatec Rio Preto- 2022–2024

Technologist-level degree.

Solid experience in programming languages (HTML, CSS, JavaScript) with a proven ability to create intuitive and efficient interfaces, combining technical knowledge with user-centered design principles to optimize the digital experience.

Technical Degree in Business Administration

Etéc Philadelpho Gouvêa Netto – 2019–2020

Learning focused on business creation and operations. Final course project:

Business Plan “Toca do Hot Dog”.
